

NEXT GENERATION BIOSCIENCE LEADERS

EXECUTIVE EDUCATION FOR WOMEN

IN THE LIFE SCIENCE INDUSTRY

JANUARY 19 - 23, 2009

CLAREMONT, CALIFORNIA

A PARTNERSHIP BETWEEN KECK GRADUATE INSTITUTE AND SMITH EXECUTIVE EDUCATION FOR WOMEN

As biotech companies mature, they need to develop and retain the best and the brightest – and now, more than ever, this means women!

The second annual Next Generation Bioscience Leaders forum provides a unique opportunity to advance high-potential women leaders by providing them the opportunity to learn from and network with executives from leading pharmaceutical, medical device, and biotechnology companies.

Next Generation Bioscience Leaders will help your company tap the skills, energy, and motivation of its most promising women executives through seminars providing strategic perspectives in critical management and operational areas.

The Next Generation Bioscience Leaders experience will set talented scientists and business professionals on the path toward lasting and strategic contributions to the enterprise.

This dynamic collaboration brings together two leading institutions: KGI – experts in developing business leaders in bioscience and Smith – experts in strategic leadership development of women – to provide the bioscience industry with a cutting-edge program to advance their fast-track women in management.

“... biotechnology represents an industrial opportunity in which the high representation of women has the potential to create new models of business and management. In my own view, however, that potential is being realized more slowly than the demographics might imply...As in so many places, opportunities for women are great and are matched by the equally great demands for the rigors of leadership: intelligence, resilience, self-confidence, persistence, vision. Change is possible, change is occurring...”

– Women in Biotechnology:
Finding a Place – Dr. Vicki L. Sato
Annals New York Academy of Sciences

CURRICULUM

Designed to afford a comprehensive understanding of the biotechnology industry, the curriculum consists of seminars, roundtable discussions, and panels led by top executives from the life science industry.

The course includes an overview of the global life science industry today and tomorrow – industry drivers, dynamics, opportunities, and threats.

- The DNA of biotech organizations – business models, organizational change, regulatory affairs, product life cycle
- The brave new Biotech Century Leader – human assets, leadership strategies and teams, global resources and challenges, partnering strategies
- Mapping your future in the industry – career imprinting, “glass ceiling” lessons learned, strategies for leadership
- Plus – small group discussions, networking lunches and receptions, thought-provoking dinner speakers

IDEAL PARTICIPANT

Next Generation Bioscience Leaders is a management development opportunity for women six to twelve years into their careers who are ready to assume higher level management positions.

PROGRAM FEE & LOGISTICS

The program dates are January 19-23, 2009. The registration fee is \$4,975 and includes tuition, materials, lodging and most meals. All accommodations are at the Doubletree Hotel, Claremont, CA and are arranged by our program managers. Individuals must make their own travel arrangements. Classes will be held at Keck Graduate Institute, other Claremont Colleges sites, and at the hotel.

The deadline for reserving space in this program is December 8, 2008.

KEY TAKE AWAYS

- Develop a strategic mindset while learning lessons critical to organizational and career success in the biotech industry
- Refresh thinking, perspective and performance
- Explore functional areas critical for biotech success
- Increase value to the enterprise by enhancing leadership skills
- Build a community of high achieving peers – invaluable over time for advice, mentoring and perspectives on best practices
- Learn from senior industry leaders who have advanced their career paths and contributed significantly to their organizations
- Step back from the day-to-day and assess professional potential to maximize growth opportunities
